

This lab contains a [stored cross-site scripting](#) vulnerability in the comment functionality. To solve this lab, submit a comment that calls the `alert` function when the comment author name is clicked.

In this Lab there is a functionality for posting comments,

As stated in the Lab Description, we can leverage the stored xss vulnerability in the comment section in the following way.

Leave a comment

Comment:

hello!!!!

Name:

kakarot

Email:

admin@admin.com

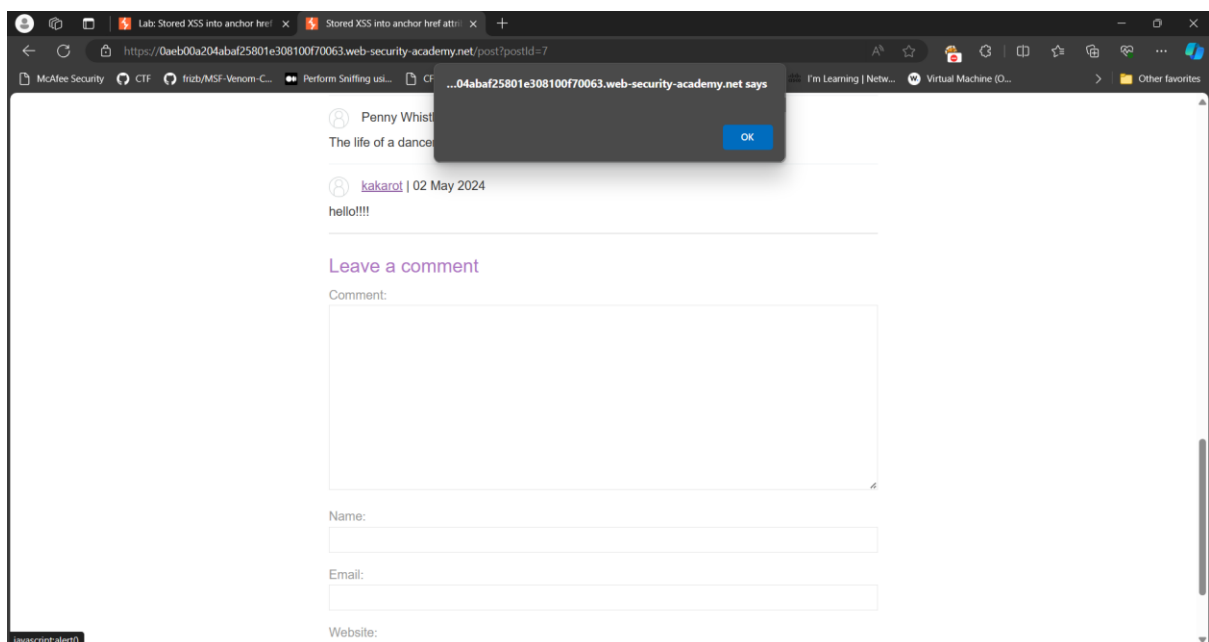

Website:

javascript:alert()

Post Comment

[< Back to Blog](#)

The Above comment will trigger an `alert()` Function whoever visit that particular blog.

Stored XSS into anchor href attribute with double quotes HTML-encoded
